- Four types of products are provided available: 5-shelf rack, 4-shelf rack, 4-shelf hanger, and 3-shelf hanger. However, they can be freely transformed according to your purpose.
  - Read this installation guide carefully before assembling or disassembling the product. Keep this guide for later use.
-

# Features / Safety Precautions

## Features

You can combine two or more same or different products to make an extended rack or hanger.

Support beams can be installed in either direction, upward or downward, so that you can make not only typical shelves but also baskets.

## Safety Precautions

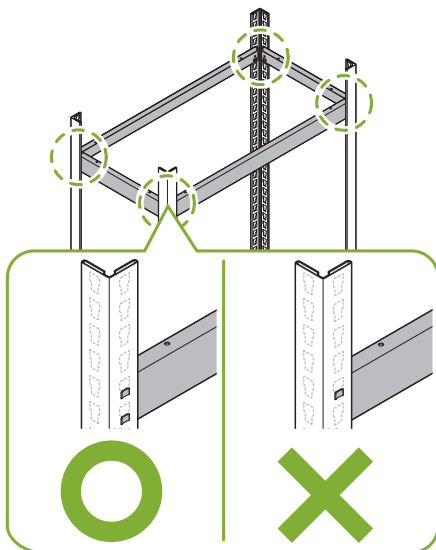

Read these precautions before using this product to secure your safety and to prevent property damage.

- Keep the product away from chemicals.
- Do not keep the product in a high temperature environment or near heat sources.
- Make sure that the product is assembled correctly. If a part is old or damaged, replace it with a new one.
- Wear gloves when assembling or disassembling the product, and take care not to have your fingers pinched.
- Do not climb or hang on the product.
- Do not apply impact or excessive force to the product.
- Take care not to touch protrusions or edges of the product. Doing so may cause injury.
- Do not load over the maximum capacity, and make sure that things are kept balanced over the entire rack.
- Use a dry towel to clean dirt. When the product is soiled with liquid, wipe it with a dry towel and dry it until moisture evaporates completely.
- Keep the product in a dry and well-ventilated place. Keeping it in a humid place for a long time may cause shelf boards to be bent or twisted.
- The warranty does not cover damage caused by misuse or negligence.

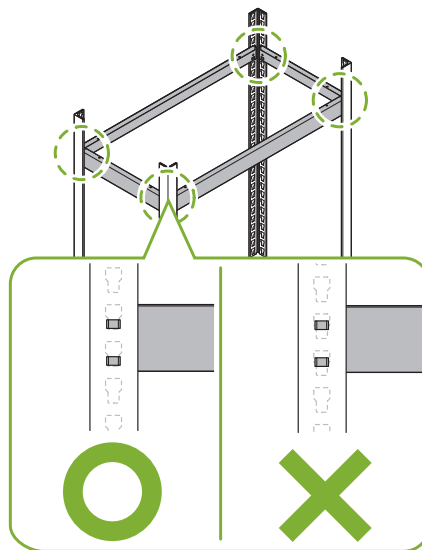

# Installation Precautions

## Installation Precautions

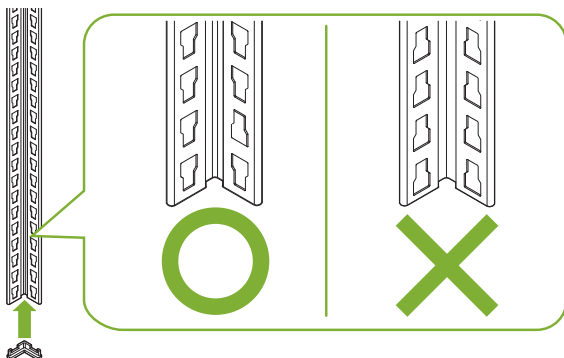

Bear in mind these precautions when assembling the product.

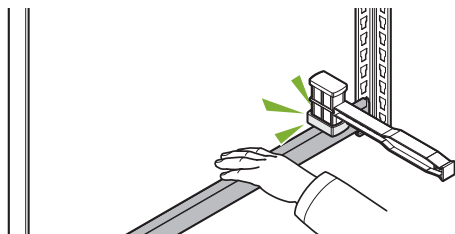

Support beams have two tabs on both sides. Make sure that every tab is hooked securely.

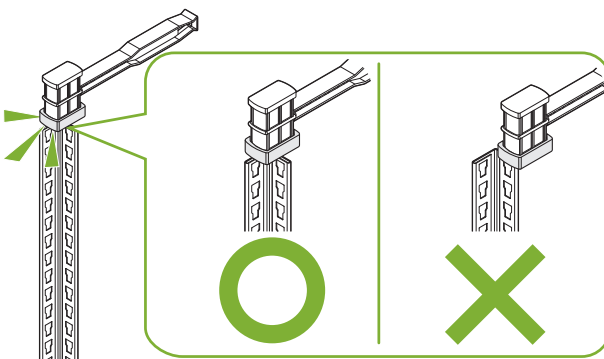

Make sure that support beams are fastened to the end of post hole. Failure to observe this may cause them to be shaky or tilted.

When setting up posts, make sure that the small square of post faces downward.

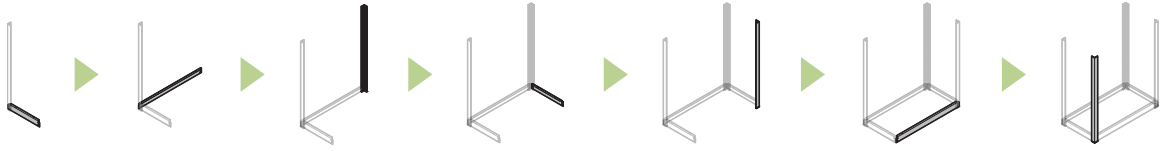

When connecting another side of support beam by hammer after completing connection of one side of support beam, hold center of support beam with hand tightly to prevent it from bouncing.

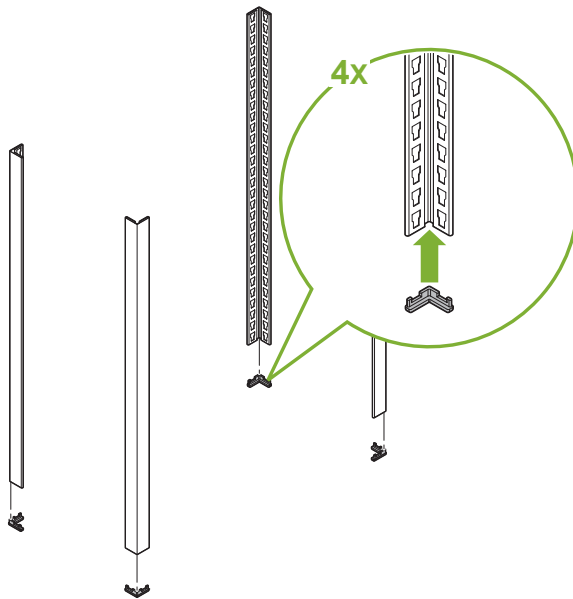

When connecting posts with post brackets by hammer, take care not to hit the sides. Failure to observe this may cause them to be bent.

# Common Assembly Steps

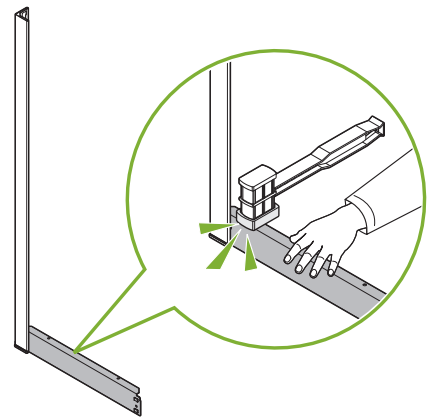

Whatever type of product you assemble, the initial steps of assembly is the same.
